

Final Project Instructions and Submission Requirements

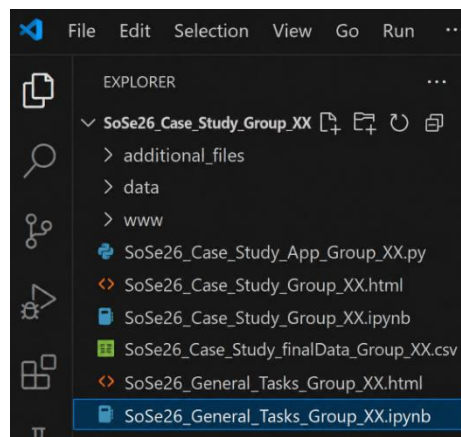

Group Work

The final project is assessed as a group project. Good communication and a clear division of tasks will make the work easier, make it as soon as possible. If a group member does not participate, first try to resolve the issue within the group. If no solution is found, inform the teaching team as early as possible, preferably within the first two weeks. This helps us address the issue before the group is negatively affected.

Many technical questions can be solved through documentation, forums, and other online resources. The final project consists of general tasks, case study: Data analysis and web application. [Download your assigned case study from ISIS](#). The required Data folder is available on tubCloud through the link provided on ISIS.

Folder Structure

1. Create a project folder named: **SoSe26_Case_Study_Group_<GroupNumber>**. Submit two Jupyter Notebooks and their HTML exports and Web application as python file:
 - General tasks:
SoSe26_General_Tasks_Group_<GroupNumber>.ipynb
 - Case study:
SoSe26_Case_Study_Group_<GroupNumber>.ipynb. In the file Table of Contents should include things like: Importing the data, Data preparation, Creation of the final dataset, Evaluation and Result.
 - Web Application (Dash and/or Streamlit):
SoSe26_Case_Study_App_Group_<GroupNumber>.py
2. Sub-folders to include in the submission folder:
 - Additional files: Screenshots of app and other files do not fit other cases
 - Data: original data in its folder, and final data:
SoSe26_Case_Study_finalData_Group_<GroupNumber>.csv
 - www: static app files such as images, CSS, JavaScript, and fonts.

Code and Documentation Requirements

- Your documentation must include all code used during the analysis. Each big step should be explained briefly and clearly. Code that does not run or does not produce the required results will not be evaluated and will receive zero points for the affected section.
- Please do not let trash/dead code and comments. It is an examination document.
- The submitted notebooks must meet the following requirements:
 - For submission, you must compress the files into a .zip
 - Run all cells before saving so that the latest outputs are visible.
 - Ensure that all code works on an updated Anaconda installation.
 - Always add screenshots of WebApp in case it does not work. Submit different screenshots where one can see the functionalities of the App.
 - Clean the data according to the methods and rules taught in the course.
 - Comment on the code clearly enough for non-specialists to understand the main steps in terms of business, statistics and data.
 - Suppress unnecessary warnings and system messages.
 - Make sure the complete analysis can be reproduced from the original data.
 - Do not modify the original data files.
 - **Do not submit the original dataset.** Submit all other files and keep the original data folder empty. We will place the original data there and run your code.
 - Submit only the final dataset from your analysis required by your application.
 - Store file paths and data-loading steps so that the analysis works when the original data is placed in the documented folder.

Checklist:

- SoSe26_General_Tasks_Group_XX.ipynb
- SoSe26_General_Tasks_Group_XX.html
- SoSe26_Case_Study_Group_XX.ipynb
- SoSe26_Case_Study_Group_XX.html
- SoSe26_Case_Study_finalData_Group_XX.csv
- SoSe26_Case_Study_App_Group_XX.py

Submission

The case study must be submitted by **11:59 PM on September 01, 2026**. [A link](#) to an upload folder is provided on the [ISIS page](#).

The link expires after the deadline. Late submissions will not be accepted for evaluation. Please upload only one zip file per group, there is not a success message after upload. Good luck!
